

**Park Royal Mutual Water Company**  
May 30, 2023

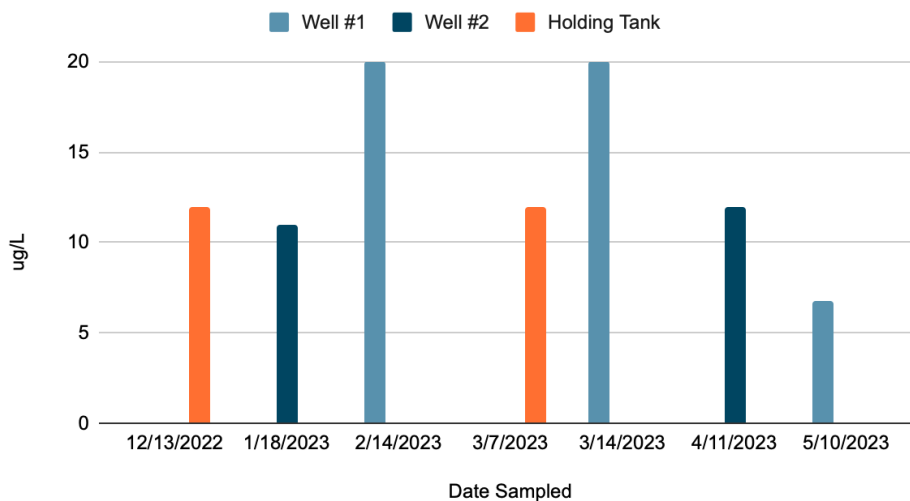

Dear Park Royal Mutual Water Company Member,

You are receiving this notice as a member of the Park Royal Mutual Water Company. As you are aware, The California State Water Resources Control Board has advised the Park Royal Mutual Water Company Board of Directors of an on-going water quality violation related to unacceptable arsenic levels in drinking water. This notice serves to inform you that we still have elevated levels of arsenic. Currently the Board of Directors is navigating solutions to adhere to requirements outlined by the Compliance Order Number 02\_18\_21R\_006. You were mailed a copy of the citation in May 2021. A copy can be found online at [prmw.com/weebly.com/consumer-confidence](http://prmw.com/weebly.com/consumer-confidence). The PRMWC Company does not currently, nor has in the past, filtered the water. Only chlorine is added. The State and Board continues to recommend members should either filter their water or use bottled water for drinking.

In the interest of transparency and on-going updates, please see the chart below for arsenic concentrations since Quarter 3, 2022. Well #2 is our primary well. Well #1 only kicks on when demand from Well #2 exceeds needs. The water distributed to homes comes from the “holding tank.”

\*The Maximum Contaminant Level (MGL) is defined as 10 ug/L (equivalent to 0.01 mg/L)

**Historical Arsenic Concentrations**

Sincerely,  
Erin Fender  
Kristen Tantarelli  
Doreen Trenholm  
Park Royal Mutual Water Company Board of Directors
